Existing service guidance

cPanel manages an existing hosting account. Features and quotas depend on the package assigned to that account.

Before you start

Use the access and features actually assigned to your account. Keep a rollback or recovery route before changing existing service settings.

Steps

1. Use the panel link supplied through Customer Access and verify HTTPS.
2. Review account resource use before a large upload, import or backup.
3. Choose the relevant domain before changing files, databases or email settings.
4. Record the change and test its effect. Ask support when the required feature is unavailable.

Verify the result

You can manage the intended account without accessing another customer. Never share a panel password or bypass a certificate warning.

Help and related information

Contact support, service status, and Customer Access. Never send passwords or recovery codes.
