Existing service guidance

In this guide: [Before you start](#) | [Steps](#) | [Verify the result](#) | [Help and related information](#)

Information access does not automatically authorize a system change. Roles and approvals are enforced on the server.

Before you start

Use the access and features actually assigned to your account. Keep a rollback or recovery route before changing existing service settings.

Steps

1. Use your own assigned account and organization.
2. Review the requested action and its destination before authorizing it.
3. Grant only the permissions needed for the task; a physical button never creates administrator authority.
4. Report a denied operation with its safe error text instead of trying another route to bypass the denial.

Verify the result

Allowed actions work for the correct role and unauthorized actions remain denied.

Help and related information

Contact support, service status, and Customer Access. Never send passwords or recovery codes.
