

XORVAULT MFA

Version 1.0.0 | Updated 2026-09-05 | 1 min read

Preparation / invited access

In this guide: [Before you start](#) | [Steps](#) | [Verify the result](#) | [Help and related information](#)

Add MFA using the options actually available in your invited vault account.

Before you start

Use the access and features actually assigned to your account. Keep a rollback or recovery route before changing existing service settings.

Steps

1. Verify the vault hostname before opening security settings.
2. Enroll a supported factor and keep its seed or recovery codes private.
3. Test a new sign-in while preserving access through the current session.
4. Keep a separate recovery method so losing the device does not remove every path to the vault.

Verify the result

A fresh sign-in requires the factor and the protected recovery method remains usable.

Help and related information

Contact support, service status, and Customer Access. Never send passwords or recovery codes.
