Preparation / invited access

XORVAULT access is invitation-based. Do not begin moving important credentials until account recovery is understood.

Before you start

Use the access and features actually assigned to your account. Keep a rollback or recovery route before changing existing service settings.

Steps

1. Use the exact approved vault address and your own invited account.
2. Set a unique account secret and the supported MFA method.
3. Record a protected recovery plan before relying on the vault.
4. Create and retrieve a non-sensitive test entry before importing real data.

Verify the result

The test entry works and you understand recovery. Support must never ask you to reveal stored passwords or a master secret.

Help and related information

Contact support, service status, and Customer Access. Never send passwords or recovery codes.
